Gina Ricci, PT, & the staff at Gina’s Physical Therapy have teamed with the RX24 QuadraStep System™ to bring their clients the best possible orthotic support system at an affordable price.

Gina and her staff specialize in connecting the foot to the knee, hip and back. They understand the importance of how properly balanced feet can dramatically improve the outcomes of physical therapy and help you get the results you deserve!

How do I get foot-typed for my orthoses?

As part of your initial evaluation, or as part of your ongoing treatment, your clinician may assess your foot function, and relate to you how it may be exacerbating your condition. This may include a standing postural assessment, evaluation of your gait, examination of callus patterns, etc.

How quickly can I get my orthoses?

The **QuadraSteps™** can often be dispensed immediately upon your assessment. In some cases, they may need to be special ordered and can be available in just a few short days.

Do I need more than one pair?

QuadraSteps™ are removable from shoe to shoe, but a 2nd pair may be more convenient, especially if used for sports. We usually recommend using your first pair for 3-4 weeks, then call or consult your therapist regarding a 2nd pair.

QuadraSteps™ are available at:

WHAT’S THE **QuadraStep SYSTEM™?”**

The **RX24 QuadraStep System™** is based on a clinical algorithm identifying 24 unique foot types. These 24 foot types are subdivided into 6 groupings of 4, known as quads. Each quad has its own very specific foot and gait characteristics. Your foot type (quad type) can influence not only how you walk but the conditions and pathologies that may afflict you throughout your life. Unlike other prefabricated arch supports that have a “one shape fits all” limitation, the **RX24 QuadraStep System™** offers a more tailored solution to your foot type.

WHY CHOOSE **QuadraStep™?”**

The **RX24 QuadraStep System™** offers 6 Quad specific functional orthotics, each biomechanically tailored to a true custom prescription. These orthotics are available at a fraction of the cost of a typical custom device. Off-the-shelf “arch supports”, although less expensive, usually lack adequate biomechanical support. Unlike many pre-fabricated orthotic lines, function has not been sacrificed for fit. In other words, the **QuadraSteps™** integrate many features normally reserved for custom devices.

By choosing the **RX24 QuadraStep System™**, you are choosing orthotics that are designed for your foot type based on Nolaro’s patent pending foot-typing system.

HOW LONG WILL THEY LAST?

Depending on usage, a pair of **QuadraStep** orthoses should last approx. 2 years.

CAN I WEAR THEM IN ALL MY SHOES?

QuadraSteps are designed to fit in athletic and casual-type footwear as they are corrective in nature. They will not fit in heeled dress shoes. They are designed to improve your foot position and decrease postural abnormalities.

WILL IT TAKE LONG TO BREAK THEM IN?

Most individuals are able to wear their orthoses full-time within 7-10 days.
